

INFANT RESPIRATORY DISTRESS SYNDROME WIKIPEDIA

[infant respiratory distress syndrome wikipedia](#)

Infant respiratory distress syndrome (IRDS), also called neonatal respiratory distress syndrome (NRDS), respiratory distress syndrome of newborn, or increasingly surfactant deficiency disorder (SDD), and previously called hyaline membrane disease (HMD), is a syndrome in premature infants caused by developmental insufficiency of pulmonary surfactant production and structural immaturity in the ...

Terminology. ARDS is the severe form of acute lung injury (ALI) and of transfusion-related acute lung injury (TRALI). The Berlin definition included ALI as a mild form of ARDS. However, the criteria for the diagnosis of ARDS in the Berlin definition excludes many children and a new definition for children was called pediatric acute respiratory distress syndrome (PARDS).
